SUMMARY

Solutions Engineer with 2+ years of experience designing, building, and maintaining full-stack web portal applications and REST APIs on cloud infrastructure. Experienced across the full SDLC — from gathering business requirements and proposing architectural solutions, to implementation, CI/CD deployment, and production support. Comfortable coordinating with distributed/offshore engineering and infrastructure teams in agile environments.

EXPERIENCE

Solutions Engineer — PepsiCo

August 2024 – Present | Hyderabad, IN

- Designed and built full-stack web portal applications end-to-end — React/Next.js front ends backed by Node.js-based (Express) and Python (FastAPI) REST APIs — translating business requirements from SAP functional stakeholders into technical architecture and Pydantic-validated API contracts.
- Built and shipped a production-grade enterprise RAG chatbot portal for natural-language querying of SAP documentation, cutting document retrieval time by 90%; owned the API layer end-to-end and coordinated with infrastructure teams on deployment.
- Built a full-stack QA web portal integrating Azure DevOps and GitHub APIs with an OCR pipeline to automate test-evidence validation — covering requirements analysis, design, implementation, and ongoing maintenance across the SDLC.
- Set up and maintained CI/CD pipelines for automated build, test, and deployment of web services, working with infrastructure/DevOps teams on releases and upgrades; supported the application post-deployment.
- Contributed to a LangGraph-based governance web application (GRC Copilot) automating SAP emergency-access validation by correlating justifications with usage logs and generating audit-ready risk reports — proposing architectural approaches based on analysis of business/compliance requirements.
- Worked within agile delivery cycles, coordinating with cross-functional and distributed teams to prioritize and ship features.

PROJECTS

Enterprise Agentic RAG Web Platform — LangChain, LangGraph, Next.js, FastAPI

- Architected and built a production-grade full-stack web application (Next.js front end, FastAPI backend) with a multi-step agent pipeline, intent detection, multimodal document ingestion, and an LLM gateway with automatic fallback routing; added input guardrails and a dedicated evaluation suite for retrieval/response quality.
- Containerized the frontend and backend and deployed them on a managed cloud container orchestration service behind a load balancer with auto-scaling; set up CI/CD for automated build, test, and deployment — end-to-end ownership across the SDLC.

Autonomous Sales Intelligence Web Agent — LangGraph, MCP, FastAPI, Next.js

- Designed and built a full-stack multi-agent web application (Next.js UI + FastAPI backend) that autonomously researches companies and prospects via parallel, tool-using agents pulling web, leadership, news, and CRM data in real time to generate lead-qualification scores and outreach content.
- Reduced manual prospect research time from hours to under 30 seconds through architectural and API design decisions.

EDUCATION

Vellore Institute of Technology

B.Tech in Computer Science Engineering (Cyber Physical Systems), CGPA 8.86/10.0 — Chennai, IN — 2020–2024

CERTIFICATIONS & ACHIEVEMENTS

- AWS Certified AI Practitioner
- AWS Certified Cloud Practitioner
- SAP Certified – Generative AI Developer

- SAP Certified – Solution Architect
- Postman API Student Expert

SKILLS

- Languages: Python, Java, C++, JavaScript, SQL
- Web/Cloud: React.js, Next.js, Node.js (Express), Django, FastAPI, AWS, Google Cloud
- APIs & Architecture: REST API design, Pydantic/schema validation, microservices, CI/CD
- AI: LangChain, LangGraph, RAG, Prompt Engineering, FAISS, OCR, Agentic AI, MCP
- Tools: Git, Postman, Jupyter, Azure DevOps

PUBLICATIONS
